25X1

1. A former German underground installation was discovered in 1949 in the forest area located about one kilometer from Przytor (Pritter), between Odra Port and Przytor. It has not been revealed whether this discovery is an ammunition dump or munitions factory. The Germans inundated this installation when they retreated from Poland in 1945 so it was not discovered until the artificial pond became dry in 1949. Two entrances were discovered to this installation, namely: a well-constructed iron and concrete tunnel with its entrance located about 100 meters from the installation, and another tunnel, which is still partially under water, with its entrance nearer to the installation.

2. [] this discovery is a well-kept secret and is probably considered to be an important find by the authorities because a dual-tracked railroad line is under construction from Odra to the installation. [] this railroad line will be completed by the spring of 1954. Furthermore, a very good road connects Przytor with Odra (Odra is the main railroad station of Swinoujscie). The area on each side of this road, which consists mainly of woods, has been declared out of bounds for unauthorized personnel, and patrols and stationary guards are always on duty on the road and in the woods, as well as in the area of the underground installation.

Comment. [] a large underground bunker, 800 meters west of the Przytor railroad station, but it cannot be ascertained that this is the same installation. The bunker was equipped for use as quarters and following the war was partially destroyed and plundered but was entirely rebuilt in 1952 []
